

# LABORATORY SERVICES

SEADOWN  
VETERINARY SERVICES

We have our own well equipped laboratory based at the Hospital in Frost Lane, Hythe. We have two experienced lab technicians that run the lab. This enables us to analyse your pet's samples quickly and efficiently 24 hours a day. The results of these tests are then interpreted by your vet, who will discuss them with you.

Blood tests may be run as a health screen before a general anaesthetic, or because your animal is unwell. Analysis of urine, faeces, skin scrapings, biopsy material and infectious material may all be useful in providing the correct treatment for your animal.

We are able to perform many tests in our laboratory including the following:

- Pre-operative profiles
- Foal IgG testing
- Blood gas analysis
- Microscopy
- Lyme Disease testing
- Blood typing
- Electrolytes
- Haematology
- Biochemistry
- Exotic profiles
- Equine Worm Egg Counts
- Full Canine, Feline and Equine health profiles
- Bovine profiles
- Urinalysis
- Bacteriology

For more extensive and specialist tests we may send your pets samples to an external laboratory for analysis. The results of these tests will often take longer to be reported, as they are more involved.

Delivering first-class veterinary care to the New Forest since 1923
